

SUITABLE FOR: EIFFEL, TORROJA, CODERCH, PAXTON, MIES AND GAUDÍ

TF-35 FIXATION SYSTEM

The TF-35 fixation system is used when the mesh has angled top or bottom edges. Prior to cutting the sloped edge of the mesh, a metal profile is welded to the mesh and is then capped with a U-shaped trim profile. Holes within this edge treatment accept a clevis and pin as means for providing the load. All materials are made from AISI316 stainless steel material. A powder coated finish can be applied upon request. The TF-35 fixation system is applicable to the following mesh patterns: Eiffel, Torroja, Coderch, Paxton, Mies and Gaudí.
